Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, and 18, drawn to a pad frame, classified in class 261, subclass 106.
 - II. Claims 7-15, 19, and 20, drawn to an evaporative cooler, classified in class 239, subclass 43.
 - III. Claims 16 and 17, drawn to a process, classified in class 95, subclass 198.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination claims require plural louvered openings, while the subcombination claims only require a single louvered opening. The subcombination has separate utility such as a dust filter.
3. Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, such as removal of solid particulates from a gas stream.

4. Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, such as removal of solid particulates from a gas stream.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. **Applicant should note that Claim 16 as currently recited is in two sentence form. Apparently the second sentence of claim 16 should be rewritten as dependent claim 17. Currently the application does not include a claim numbered as claim 17. Also, the second sentence of claim 16 (apparent dependent claim 17) is a method claim that depends from claim 15, which is not a method claim. Apparently, the second sentence of claim 16 (apparent dependent claim 17) should depend from claim 16, which is the only properly numbered method claim currently recited in the application. Applicant should make appropriate corrections in response to this Office action.**
